

Oubliette by Dan Henderson & Audio by Tom Porter

System Requirements
Apple II+, IIe, IIc, IIgs. The game runs at any speed but best is 1-3mhz. Please make sure Uppercase is selected before you start the menu sequence.

Game Controls
Keyboard – you can select your own keys. The game comes preset to A,Z,N,M but you can choose your own direction keys in the game menu (uppercase).

Game Play
Oubliette is a unique puzzle game which presents new challenges on each of the 6 levels. Without giving too much away, you need to escape each dungeon using a sequence of doors and keys. Don't rely on linear thinking, things are not always as they seem!

Hint: you may need a pen and paper to solve some of the more complex puzzles.

Writing Oubliette

I wrote Oubliette in 100% Applesoft Basic using ‘816 Paint’ to draw the levels and ‘Shape Mechanic’ by Beagle Bros for the sprites Shape Tables. Each level is an independent Basic program which loads from the previous. It was written back in 2019 and whilst probably not fantastic coding (I was re-learning Basic at the time), it has definitely stood the test of time in terms of ‘playability’.

Audio by Tom Porter..

“The sound effects in Oubliette were created directly on the Apple II by hooking up a stereo system to the cassette input. They were then processed with equalizer settings. Recording 1bit audio is usually a tedius task involving many re-recordings and listening sessions and can often take up to 10 or 15 tries to get a single halfway decent sound effect. Each time the equalization settings have to be tweaked to achieve the best outcome”

Oubliette 2021

If you enjoy playing Oubliette, you will be pleased to know that there is a sequel! Oubliette 2021 will be released by ‘8 bit Shack’ very soon!
